CONTOUR TREATMENT 0.4 oz

Specific eye contour and above the lip area treatment

Safflower oil: Its very high content in linoleic acid (Omega 6) associated with oleic acid (Omega 9) gives safflower oil the reputation of stimulating cell regeneration. Therefore, it seems suitable for mature or fragile skin.

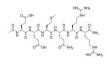

Hyaluronic acid: A biological polysaccharide which has the properties of capturing water and fighting against free radicals to protect skin cells, which delays aging signs and has a powerful anti-wrinkle effect.

Squalane: Derived from olive oil, its lipid structure is very close to the skin's, which nourishes it by providing softness and comfort.

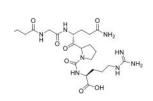

Acetyl Hexapeptide-8: Also called argireline, it is a synthetic peptide made from botulinum toxin (Botox®). A powerful anti-aging and anti-wrinkle peptide, specially designed to reduce expression lines by limiting the movement of the muscles causing wrinkles.

Vitamin A: Essential to maintain epithelial cells, it revitalizes the skin. Vitamin A deficiency causes dryness and thickening of the stratum corneum with keratinization of the connective tissue.

Vitamin E: Biological antioxidant that strengthens cell membranes and red blood cells. It prevents vitamin A and essential fatty acids from oxidation. It fights against free radicals. Being liposoluble, it finds its way within the phospholipid membrane and acts in the hydrophobic phase.

Contains **anti-aging peptides** made up of amino acid chains known to boost collagen production
